Profile

I lead design for APplus ERP at Asseco Solutions, a platform for mid-sized manufacturers across Germany, Austria and Switzerland, and I own the design system it runs on as a released package, not a Figma file. With two senior designers I designed four of its products from zero: Elly, the Best Practice Hub, Documents and Analytics. APplus won Gold in the User Experience category of ERP-System des Jahres in 2025 and again in 2026. Ten years in data-dense, regulated software before that: ERP, insurance and healthcare, legal, industrial energy.

What I own

The product model. The navigation, content and interaction model every APplus module follows, desktop and shop floor, and the information architecture of each new application.

The design system, as code. FOX: tokens and component APIs authored in Figma, implemented in Angular, React and web components, documented in Storybook, tested in Chromatic, published to Nexus for six product teams. I author and merge component pull requests myself.

The team. Two senior product designers; work split by application, reviewed in a weekly critique.

Sign-off, and the work after handoff. Design acceptance is in the definition of done. I review pull requests against the frames, run design QA on the build, and reconcile the file to the code. Where a flow is easier to show than describe, I hand over a working prototype with the Figma file, and I design components in code.

The research rhythm. Quarterly interviews, journey mapping, usability testing every release, run by me.

Experience

Lead Designer, UX Engineer — 11/2023 – present

Asseco Solutions DACH, APplus ERP · B2B · Karlsruhe, Germany, remote

Own product design for a multi-module ERP used across DACH on desktop and mobile. Lead two senior product designers. Own the FOX design system.

APplus Analytics — 01/2026 – 09/2026 · new product

- Customers reported through a third-party BI tool. Designed the in-house replacement, a data warehouse and the analytics application on it: data models, query builder, AI analyst, visualisation. One analytical model so a report built by one role stays legible to another; nine surface rules that govern every control.
- Validated with eight moderated sessions and a two-customer beta, fielded by me. Presented at Vision Days, 22 September 2026; generally available from October 2026.

APplus Documents — 10/2025 – 08/2026 · new product

- Versioning, search, permissions and retention over documents that lived in network drives and mail threads, under German commercial retention law, where a deleted document is not gone.
- A three-layer permission model a non-technical administrator can reason about: 17 default-deny system permissions, content permissions by metadata, additive multi-role resolution. Audit-proof archiving, the digital dossier and a migration assistant in the same model.

APplus Best Practice Hub — 08/2024 – 08/2025 · new product

- Over 50 field-tested Flowboard templates, offered in a modal table nobody could search or filter. Rebuilt as a catalogue a customer can narrow, judge and install without leaving the screen. After release, questions to consultants fell by about 22 percent.

Elly, the platform's first AI assistant — released with APplus 9, 04/2025 · new product

- Streaming answers over the documentation with cited sources, confidence and error states, and handoff to a person when the system should not act alone, desktop and mobile. The states around the answer decide trust, not the chat bubble.
- My study with 13 consultants changed the roadmap: 12 of 13 would use it again, trust scored lowest, so citations shipped; 8 of 13 had never found it, so discovery became a project.

FOX design system — 2023 – present

- Built from nothing; led the migration to v3 across six products. One token set behind the Figma library and the code, Code Connect on every component, Storybook on Chromatic as the shared reference. I own the component API and the tokens and review every pull request into the library.

Experience, continued

Senior UX/UI Designer
08/2022 – 08/2023

Volvo Group · contract · Wrocław, remote

- Redesigned Volvo's enterprise ERP and built its design system on the corporate Volvo Design System, extending its tokens into the rebuilt components through a major version.
- Access and permissions: roles, entitlements, approval paths. Delivered with four Angular developers, a business analyst, a product owner and a project manager; ran the interviews and the moderated tests.

Senior User Interface Designer
08/2021 – 08/2022

Wolters Kluwer · freelance · Cologne, Germany

- Growth features for wolterskluwer-online.de, a legal and regulatory platform for German lawyers: user flows, visual patterns, and the core design system.

Senior UX and UI Designer
04/2020 – 07/2021

Xecta · freelance · Texas, USA, remote

- One of three designers on a production surveillance and optimisation platform for upstream oil and gas: safety-critical, data-dense visualisation for non-technical operators. Owned my streams end to end and documented them for a distributed US team. Designed the corporate website.

Earlier, and own practice

Freelance UX/UI Designer, Big Hat
10/2018 – present

My own company · remote

- Riyad Bank, Saudi Arabia (via Intellias): a mobile financial-education product in text, video and podcast, shipped to the App Store and Google Play. C-level interviews, SME sessions and A/B tests before build; the interactive 3D navigation and the illustration system.
- Big Hat, my public design system: 39 components, two token layers, WCAG AA held by a failing build, MIT, in Storybook. A real-estate investment platform; a brand system for a digital agency.

UI Designer
01/2019 – 12/2019

PZU · freelance · Warsaw

- MojePZU, web and mobile: insurance policies and healthcare services under regulatory constraints. Information architecture, account setup simplified after user interviews, the interaction and motion models.

Project Manager and Centre of Expertise coordinator
06/2017 – 10/2021

Deloitte Poland · full time · Warsaw

- Owned design for the employee health and wellbeing platform, web and mobile, and designed the career site kariera.deloitte.pl; HR Dream Team award for best wellbeing service. Regional coordinator of the Centre of Expertise for Central Europe from 2019.

Education

MA, English Philology, and BA, Management, University of Białystok · Interaction Design specialisation, UC San Diego · Google UX Design certificate · Creativity and AI, Parsons School of Design · Graphic Design and UI/UX Design, CalArts

Practice

Research	In-depth and stakeholder interviews, contextual observation, moderated and unmoderated testing, surveys, beta programmes, product analytics
Structure	Information architecture, navigation models and taxonomy for multi-module systems; flows, journeys, workflow maps, personas
Design systems	Figma libraries, variables and tokens; component and pattern documentation; governance and versioning; Storybook, Chromatic, Code Connect
Delivery and code	Dev Mode and annotated specs; design review of pull requests; components for Angular and React; Git, GitHub, Bitbucket; HTML and CSS
AI tooling	Claude and Claude Code, Codex, Cursor, Figma Make, MCP with Figma; two published agent skills that encode the design system's rules
Accessibility	Contrast in the token set; keyboard and focus behaviour at component level; WCAG AA as a standing review criterion

Recognition

ERP-System des Jahres, Gold, User Experience category, 2025 and 2026 (APplus) · WUD Silesia 10.5, speculative design award · HR Dream Team, Deloitte

Off screen, languages

Watercolour, mostly on location; birds of prey, and a course on telling them apart in flight; botanical illustration. Polish, native · English, C2 · German and Spanish, basic.
